

John Louis Del Rosario

PERSONAL DATA

Age: 26
Phone: (+63) 922 645 99 55
Blog: <http://john2x.com>
Email: john2x@gmail.com
Github: <https://github.com/john2x>
Address: Quezon City, Manila, Philippines

WORK EXPERIENCE

- 2013-Current **Collabspot** - Co-Founder, Lead Developer
- Built and maintained the entire backend with Python, Google App Engine and various other technologies. Helped maintain the Chrome extension. Lead a small team of developers.
- 2012-2013 **WeMakeProjects** - Developer
- Worked freelance on various projects using mainly Python and Google App Engine.
- 2010-2012 **88th Floor Gifts, Inc.** - Lead Developer
- Maintained legacy systems built on Visual Basic 6 and VB.Net. Generated various reports with MSSQL and wrote a decent amount of stored procedures.

EDUCATION

- 2006-2010 **University of Cebu - Banilad**
- Bachelors Degree in Information Technology

SKILLS

- | | |
|------------|--|
| Python | Python is my main programming language and the one I am most comfortable with. |
| HTML/CSS | |
| Javascript | |
| Git | |
| SQL | Google BigQuery, PostgreSQL |
| Linux | For servers and development environments |
| Frameworks | Django, webapp2, Backbone.js, Bootstrap |
| Tools | Emacs (the one true editor), Vagrant, Vim |
| Learning | On my free time, I enjoy reading about and playing with functional programming languages like Clojure, Haskell and Erlang. |

PROJECTS

I don't have much time for personal projects, but I try to contribute back to open source projects whenever I have the chance. Here is list of various recent toy projects and some open source contributions I've made so far.

appengine-fixture-loader	https://github.com/john2x/appengine-fixture-loader (Python) A fork of a Python library for loading fixtures with Google App Engine. The original library lacked certain features which we needed for Collabspot and had some disagreements with the original author on how the new features should be implemented. So a fork was the best way to go.
Python Guide	http://python-guide.org (Python) Contributed a chapter to the Python Guide project on Virtual Environments back when it was just getting started.
IMAPClient	https://bitbucket.org/mjs0/imapclient (Python) Contributed Gmail search support to the library.
replload	https://clojars.org/john2x/replload (Clojure) Utility library for reloading all referred vars and aliased namespaces in a Clojure REPL session.
shibebot	https://github.com/john2x/shibebot (Clojure) Clojure library for generating “ <i>shibe</i> ” text. Also includes a silly Reddit bot to post those texts as comments. <i>Wow</i> .
searchthecity	https://github.com/john2x/searchthecity (Clojure) Simple website which exposes data available on magiccards.info via a JSON API. Website is no longer online but is now open source.
